

Assignment for the front end UI/UX developer with some BO knowledge

- Make, using HTML/CSS a gallery of images 4x4 array
- Resize to horizontal fill browser window, placing a checkbox over the image once clicked.
- Replace the images with new random ones when completed.
(Same as the human captcha filter used by google/...).
- The use of JS should be limited to the minimum.
- Image transition and states should be handled as much as possible in CSS

Variations: after having validated all images, replace images with new ones.

Provide source code by zipping project including git folder so that

commit history can be seen.

Provide a working instance of the web-application on a page hosted by you.

Attention, no copy-paste of existing project.
